

Source Code And More

Full Version

When you purchase the full version of the Advanced Dataform you receive a completely unprotected copy giving you full access to all the UserForm's code and a comprehensive instruction manual with illustrations to help you learn how to use the code. In addition there are explanatory notes throughout the actual code.

Bonus UserForms

You will also receive a workbook with 13 UserForms that demonstrate how to use many simple controls or perform some tasks in Excel.

1. ComboBox
2. ListBox
3. CheckBox
4. OptionButton
5. MultiPage
6. Spin and ToggleButtons
7. Maximize/Minimize
8. Format Titles
9. Calculate
10. Hyperlink on UserForm
11. About UserForm
12. Menu UserForm
13. Fading Splash UserForm

Plus

1. A UserForm that allows you to password protect the Workbook in such a way that users need to enter a password to use it. The users are allowed a maximum of three attempts to insert the correct password.
2. A Calendar Form template that you can adapt for your projects. The calendar is ready to use, simply add your controls to the UserForm. It utilizes some of the methods described in the instruction manual to make the user see the calendar as if it was a separate UserForm, it is however, part of the same UserForm. Working this way eliminates the problems you may find trying to make two UserForms interact, **a problem that is often raised on Excel Forums**.
3. A demonstration utility to list all worksheets in a Workbook and navigate to them. This utility can easily be converted to an [Excel addin](#).

This has got to be amazing value

That's sixteen additional UserForms with the Advanced DataForm and instructions
